1 Nomenclature

2 Diagram

Bad diagrams $E \xrightarrow{\rho} F E \xrightarrow{\rho} F$ $G \qquad G$ Good diagrams $E \xrightarrow{\rho} F$ $G \qquad G$

$$\begin{array}{ccc}
X & \xrightarrow{f} Y & \xrightarrow{h} Z \\
 & \cup & & \cup \\
f^{-1}B & & B
\end{array}$$

Or, with something "tikzset" in the preamble, we can

$$X \xrightarrow{f} Y$$

$$\cup \qquad \qquad \cup$$

$$f^{-1}B \qquad B$$

3 Table

Tentative Schedule:

Table 2: caption

#	Due date	
1. Summarise the review paper	December, 2016	
2. Learn related mathematical tools (homo-	April, 2017	
topy thoery, group cohomology, etc.)		
3. Play with toy models such as the $1D$ quan-	Faburary, 2017	
tum walk model		
4. Possible research topics:	July, 2017	
4.1 classifying topological materials in new sym-		
metry groups, such as the space groups;		
4.2 finding new ways to classify in the non-		
interacting picture;	As above	
4.3 experiment about the effectiveness of existing;	As above	
4.4 explorer approaches to the classification in in-		
teracting.

Symmetry	Table 1: Cl Spatial Dimension	$\begin{array}{c} {\rm assification} \\ {\it Result} \end{array}$	Other Keywords
Т	0	An intger: the number of particle-occupied Kramers doublet states	
T	1	None	
T	2	\mathbb{Z}_2	
Т	3	\mathbb{Z}_2	$3D$ crystals have additional $3\mathbb{Z}_2$ invariant \Rightarrow "weak topological insulators
Q(?)	2	Characterized by μ in units of e^2/h	TKNN
Q(?)	even d	Topological invariant $(k$ -th Chern number)	
Q(?)	0	number of single-particle states with negative energy $(E < E_F = 0)$, which are filled with electrons.	
T& Q			
No T & No Q	0	\mathbb{Z}_2	
No T & No Q	1	\mathbb{Z}_2	"majorana chain"
No T & No Q	2	Topological number is integer.	Even-odd effects.
